

How Can I Remove Masking?

Sometimes the masking can be difficult to remove because it has aged for a period of time or because it has been subjected to hot/warm temperatures during storage. It can be removed simply by dampening the paper with paint thinner (mineral spirits). Let sit for a few minutes.

This breaks the bond of the latex adhesive and the paper should peel off easily. If there is any adhesive residue left it can be removed with paint thinner and then a soap and water wash.

Note: It is not necessary to use a large quantity of paint thinner.
